

RE: Proposed Re-Zoning of 2 Plots of Land at Rear of Charnwood & Giltspur Wood

Settled estate – This is a settled estate built around 1970 and is well established and just fit for purpose for the current amount of houses in same.

Cul de sac – If re-zoning goes ahead this will give more access to houses either by walkway or road access.

Traffic /Safety Issues – More development will in turn mean more traffic within the estate which will make it even more dangerous for people currently living in the estate and will create even more parking issues.

Traffic issues at the junction – At the junction of the front of the estate during school times and rush hour it is already difficult enough to get out of the estate – more houses with mean even more problems for the estate and more safety issues.

Anti-social behaviour - Easier access for others also means more anti-social behaviour – there are already issues with regard to the back of the estate and youngsters, often not even from the estate, gathering and fires being lit and underage drinking taking place. Also there are already issues with regard to house break-ins, more access will provide more routes for thieves to escape un-noticed.

Oldcourt Castle which is a historic site – This will be effected by this re-zoning. These sites should be protected at all costs as once development has taken place it is there is nothing than can be done to rectify this matter.

Trees – There are many well established trees located at the back of the estate which form an integral part of the estate and should be protected and not simply chopped down or even if they are left in situ their roots may very well be damaged by any development taking place.

House Value - How many and what type of houses are proposed in this land re-zoning. At the end of the day we all purchased our houses in a private estate. If there are to be social houses included in this development this will in turn affect the value of our houses.

With all the above matters outline I the undersigned strongly opposing this re-zoning

Trees – There are many well established trees located at the back of the estate which form an integral part of the estate and should be protected and not simply chopped down or even if they are left in situ their roots may very well be damaged by any development taking place.

House Value - How many and what type of houses are proposed in this land re-zoning. At the end of the day we all purchased our houses in a private estate. If there are to be social houses included in this development this will in turn affect the value of our houses.

With all the above matters outline I the undersigned strongly opposing this re-zoning

Alternatively look up the website & send an email with your objections

**Objections need to be received by Wicklow County Council
before 5pm Friday 15th September '17**

**Once development has taken place there is no
going back !!**

RE: Proposed Re-Zoning of 2 Plots of Land at Rear of Charnwood & Giltspur Wood

Settled estate – This is a settled estate built around 1970 and is well established and just fit for purpose for the current amount of houses in same.

Cul de sac – If re-zoning goes ahead this will give more access to houses either by walkway or road access.

Traffic /Safety Issues – More development will in turn mean more traffic within the estate which will make it even more dangerous for people currently living in the estate and will create even more parking issues.

Traffic issues at the junction – At the junction of the front of the estate during school times and rush hour it is already difficult enough to get out of the estate – more houses with mean even more problems for the estate and more safety issues.

Anti-social behaviour - Easier access for others also means more anti-social behaviour – there are already issues with regard to the back of the estate and youngsters, often not even from the estate, gathering and fires being lit and underage drinking taking place. Also there are already issues with regard to house break-ins, more access will provide more routes for thieves to escape un-noticed.

Oldcourt Castle which is a historic site – This will be effected by this re-zoning. These sites should be protected at all costs as once development has taken place it is there is nothing than can be done to rectify this matter.

Trees – There are many well established trees located at the back of the estate which form an integral part of the estate and should be protected and not simply chopped down or even if they are left in situ their roots may very well be damaged by any development taking place.

House Value - How many and what type of houses are proposed in this land re-zoning. At the end of the day we all purchased our houses in a private estate. If there are to be social houses included in this development this will in turn affect the value of our houses.

With all the above matters outline I the undersigned strongly opposing this re-zoning

Settled estate – This is a settled estate built around 1970 and is well established and just fit for purpose for the current amount of houses in same.

Cul de sac – If re-zoning goes ahead this will give more access to houses either by walkway or road access.

Traffic /Safety Issues – More development will in turn mean more traffic within the estate which will make it even more dangerous for people currently living in the estate and will create even more parking issues.

Traffic issues at the junction – At the junction of the front of the estate during school times and rush hour it is already difficult enough to get out of the estate – more houses with mean even more problems for the estate and more safety issues.

Anti-social behaviour - Easier access for others also means more anti-social behaviour – there are already issues with regard to the back of the estate and youngsters, often not even from the estate, gathering and fires being lit and underage drinking taking place. Also there are already issues with regard to house break-ins, more access will provide more routes for thieves to escape un-noticed.

Oldcourt Castle which is a historic site – This will be effected by this re-zoning. These sites should be protected at all costs as once development has taken place it is there is nothing than can be done to rectify this matter.

Trees – There are many well established trees located at the back of the estate which form an integral part of the estate and should be protected and not simply chopped down or even if they are left in situ their roots may very well be damaged by any development taking place.

House Value - How many and what type of houses are proposed in this land re-zoning. At the end of the day we all purchased our houses in a private estate. If there are to be social houses included in this development this will in turn affect the value of our houses.

With all the above matters outline I the undersigned strongly opposing this re-zoning

RE: Proposed Re-Zoning of 2 Plots of Land at Rear of Charnwood & Giltspur Wood

Settled estate – This is a settled estate built around 1970 and is well established and just fit for purpose for the current amount of houses in same.

Cul de sac – If re-zoning goes ahead this will give more access to houses either by walkway or road access.

Traffic /Safety Issues – More development will in turn mean more traffic within the estate which will make it even more dangerous for people currently living in the estate and will create even more parking issues.

Traffic issues at the junction – At the junction of the front of the estate during school times and rush hour it is already difficult enough to get out of the estate – more houses with mean even more problems for the estate and more safety issues.

Anti-social behaviour - Easier access for others also means more anti-social behaviour – there are already issues with regard to the back of the estate and youngsters, often not even from the estate, gathering and fires being lit and underage drinking taking place. Also there are already issues with regard to house break-ins, more access will provide more routes for thieves to escape un-noticed.

Oldcourt Castle which is a historic site – This will be effected by this re-zoning. These sites should be protected at all costs as once development has taken place it is there is nothing than can be done to rectify this matter.

Trees – There are many well established trees located at the back of the estate which form an integral part of the estate and should be protected and not simply chopped down or even if they are left in situ their roots may very well be damaged by any development taking place.

House Value - How many and what type of houses are proposed in this land re-zoning. At the end of the day we all purchased our houses in a private estate. If there are to be social houses included in this development this will in turn affect the value of our houses.

With all the above matters outline I the undersigned strongly opposing this re-zoning

Traffic /Safety Issues – More development will in turn mean more traffic within the estate which will make it even more dangerous for people currently living in the estate and will create even more parking issues.

Traffic issues at the junction – At the junction of the front of the estate during school times and rush hour it is already difficult enough to get out of the estate – more houses with mean even more problems for the estate and more safety issues.

Anti-social behaviour - Easier access for others also means more anti-social behaviour – there are already issues with regard to the back of the estate and youngsters, often not even from the estate, gathering and fires being lit and underage drinking taking place. Also there are already issues with regard to house break-ins, more access will provide more routes for thieves to escape un-noticed.

Oldcourt Castle which is a historic site – This will be effected by this re-zoning. These sites should be protected at all costs as once development has taken place it is there is nothing than can be done to rectify this matter.

Trees – There are many well established trees located at the back of the estate which form an integral part of the estate and should be protected and not simply chopped down or even if they are left in situ their roots may very well be damaged by any development taking place.

House Value - How many and what type of houses are proposed in this land re-zoning. At the end of the day we all purchased our houses in a private estate. If there are to be social houses included in this development this will in turn affect the value of our houses.

With all the above matters outline I the undersigned strongly opposing this re-zoning

Also there are already issues with regard to house break-ins, more access will provide more routes for thieves to escape un-noticed.

Oldcourt Castle which is a historic site – This will be effected by this re-zoning. These sites should be protected at all costs as once development has taken place it is there is nothing than can be done to rectify this matter.

Trees – There are many well established trees located at the back of the estate which form an integral part of the estate and should be protected and not simply chopped down or even if they are left in situ their roots may very well be damaged by any development taking place.

House Value - How many and what type of houses are proposed in this land re-zoning. At the end of the day we all purchased our houses in a private estate. If there are to be social houses included in this development this will in turn affect the value of our houses.

With all the above matters outline I the undersigned strongly opposing this re-zoning

RE: Proposed Re-Zoning of 2 Plots of Land at Rear of Charnwood & Gilspur Wood

Settled estate – This is a settled estate built around 1970 and is well established and just fit for purpose for the current amount of houses in same.

Cul de sac – If re-zoning goes ahead this will give more access to houses either by walkway or road access.

Traffic /Safety Issues – More development will in turn mean more traffic within the estate which will make it even more dangerous for people currently living in the estate and will create even more parking issues.

Traffic issues at the junction – At the junction of the front of the estate during school times and rush hour it is already difficult enough to get out of the estate – more houses with mean even more problems for the estate and more safety issues.

Anti-social behaviour - Easier access for others also means more anti-social behaviour – there are already issues with regard to the back of the estate and youngsters, often not even from the estate, gathering and fires being lit and underage drinking taking place. Also there are already issues with regard to house break-ins, more access will provide more routes for thieves to escape un-noticed.

Oldcourt Castle which is a historic site – This will be effected by this re-zoning. These sites should be protected at all costs as once development has taken place it is there is nothing than can be done to rectify this matter.

House Value - How many and what type of houses are proposed in this land re-zoning. At the end of the day we all purchased our houses in a private estate. If there are to be social houses included in this development this will in turn affect the value of our houses.

With all the above matters outline I the undersigned strongly opposing this re-zoning

RE: Proposed Re-Zoning of 2 Plots of Land at Rear of Charnwood & Giltspur Wood

Wicklow County Council
12 SEP 2017
PLANNING DEPT.

Settled estate – This is a settled estate built around 1970 and is well established and just fit for purpose for the current amount of houses in same.

Cul de sac – If re-zoning goes ahead this will give more access to houses either by walkway or road access.

Traffic /Safety Issues – More development will in turn mean more traffic within the estate which will make it even more dangerous for people currently living in the estate and will create even more parking issues.

Traffic issues at the junction – At the junction of the front of the estate during school times and rush hour it is already difficult enough to get out of the estate – more houses with mean even more problems for the estate and more safety issues.

Anti-social behaviour - Easier access for others also means more anti-social behaviour – there are already issues with regard to the back of the estate and youngsters, often not even from the estate, gathering and fires being lit and underage drinking taking place. Also there are already issues with regard to house break-ins, more access will provide more routes for thieves to escape un-noticed.

Oldcourt Castle which is a historic site – This will be effected by this re-zoning. These sites should be protected at all costs as once development has taken place it is there is nothing than can be done to rectify this matter.

Trees – There are many well established trees located at the back of the estate which form an integral part of the estate and should be protected and not simply chopped down or even if they are left in situ their roots may very well be damaged by any development taking place.

House Value - How many and what type of houses are proposed in this land re-zoning. At the end of the day we all purchased our houses in a private estate. If there are to be social houses included in this development this will in turn affect the value of our houses.

With all the above matters outline I the undersigned strongly opposing this re-zoning
